

About 180 more approved captains a month medium confidence — not a three-decimal forecast

~134 from an RC 10-day grace (C1a) + ~50 from Insurance camera UX (C1b). Disjoint people. 98.7% of approved captains already take a first trip — A2O is the bottleneck, not R2A.

Do not add 128-256 “field conversion” on this slide — 726 of C1a are the same people.

RC and Insurance are failing as photos, not as eligibility

RC 1,637 uploaded, never passed, **only** blur / weak OCR / not legible. Expired, duplicate, name mismatch, wrong type are a different pile — do not defer those.

Insurance 411, same definition. Most Insurance *volume* never uploaded after Fitness. C1b does not claim that pile.

Later attempts pass **higher**, not lower. That is capture/UX. If the remainder were harder documents, later attempts would fall.

	ATTEMPT 1	ATTEMPT 2	ATTEMPT 3
RC	65.3%	68.4%	74.1%
Insurance	67.4%	73.8%	76.4%

Pass-rate floors/ceilings for sizing come from these rows and from field-assisted RC at 78.4% — not from an assumed 85–90%.

One recommendation, two sub-actions. DL and Insurance still gate.

C1a — RC provisional activation

- 1,637 people (~300/month). In-person RC within 10 days.
- RC can defer: vehicle identity, no pre-ride passenger liability.
- 60% show-up × 74% pass → **~134/month**. Show-up is unobserved (40–80% band: ~89–188).
- **Legal/T&S required.** If they must still finish Aadhaar → Insurance before a ride, historical P(approved | passed RC) = 27% and C1a shrinks toward ~36/month. That is the Legal ask.
- **Ops:** ~180 centre visits/month at 60% show-up → about **one FTE, ₹40–60k/month** (assumed 12–15 checks/day). Not in the extract.

C1b — Insurance capture UX

- 411 people. Blur/OCR feedback at upload.
- Must still clear *before the first ride*.
- Insurance retry 67 → 74 → 76% × 91% approved-if-cleared → **~46–52/month**.
- **No deferral sign-off.** Ship without waiting on Legal for C1a.

Metric: monthly approved, split by cohort.

R2A check: 98.7% of today's approved already take a first order (3,895/3,946).

Nights + compounding economics. Not “hire near the airport.”

When: airport unfulfilled 40% vs ~3% elsewhere. 84% of that pain is 21:00–03:59. ~13 captains online vs ~37 by day. Surge is already high — a non-price constraint.

After the trip: suburban cancel 24% vs city-core 12%. Overnight return-in-20m: suburban 10.7% vs city-core 47%. Mix of suburban vs city-core **does not change overnight**. Two independent penalties, not a mix-shift.

Net ₹/cycle: worst×suburban **₹24.9** vs rest×suburban **₹56.5** vs worst×city-core ₹104.7.

ARA payout — derived, not % of fare

- Pays only unpaid suburban night completed legs (89.31%).
- ₹31.6 population gap ÷ 0.8931 = **₹35.4 / eligible leg**.
- 80 / 100 / 120%: ₹28.3 / 35.4 / 42.5 → sample **~₹69k / ₹86k / ₹103k a month**.
- 30% of the ₹350 fare (₹105) overpays. Do not use it.
- Target rest-suburban parity, not city-core (geography).

No blanket hiring. New captains inherit both penalties. Headcount only if a 4-week ARA run-rate is **not falling**.

A Opp WhatsApp, and a field gap we must not bank

CONTRAST	APPROVED	WHAT IT ACTUALLY IS
Got CAMP_WA_002 vs never got it	~29% vs ~11%	Targeting. Recipients are chosen after they already cleared RC.
Clicked vs not, among delivered	28.3% vs 29.8% (-1.5pp)	The honest contrast. Interval -3.6 to +0.6pp. Deck number: 0 pp lift. Do not scale 5×.

Field vs app/paid mechanical gap: 128–256 approved/month *if* zero selection difference. Field recruits in person. 726 of the C1a captains sit inside that gap. **Do not add ~180 to 128–256.** Test: randomised assist on ordinary app/paid signups (~900/arm to detect a 5pp approval lift).

Ranked by monthly impact. Campaign is the fastest yes.

#	WHAT	IMPACT	COST / RISK	DECISION
1	C1a 10-day RC grace + C1b Insurance UX	~180/mo (~134 + ~50)	Legal/T&S on C1a. ~1 FTE, ₹40–60k/mo visits. C1b: none	Split metric by cohort. Ship C1b without waiting on Legal.
2	ARA at ₹35.4 / eligible leg	Sample ~₹69–103k/mo	Sampled trips. Not city-core parity	4-week pilot. Success = returns up, cancels down, run-rate falling . Then maybe hire.
3	Stop 5× CAMP_WA_002; send/no-send RCT	Cost avoided + 4–6 week answer	Near zero — this week	Aadhaar pass + approved. ITT, not clicks.

Do not spend next: 5× WhatsApp · blanket airport hiring · treating 128–256 as a supply target · 30% of fare as an ARA price.
